SAMPLE QUESTION PAPER Subject: Computer Science Class: XII (2017-18)

Time	e: 3 Hrs	. N	M.M.:70		
Instr	uctions	:			
	(a) Al	l questions are compulsory,			
	(b) An	aswer either Section A or Section B:			
		(i) Section A - Programming Language with C++			
		(ii) Section B - Programming Language with Python			
	(c) Se	ction C is compulsory.			
		SECTION – A (C++)			
Q.	Part	Question Description	Marks		
No.					
Q1.	1. (a) What is the role of a parameter/argument passed in a function? Can a default value b				
		assigned to a parameter(Yes/No)? If yes, justify your answer with the help of a suitable			
	example otherwise give reason.				
	(b)	Raman suggests Kishan the following header files which are required to be included in	1		
	the given C++ program. Identify the header files which are wrongly suggested				
		Raman.			
		Program:			
		void main()			
		{ char Grade;			
		<pre>cin.get(Grade);</pre>			
		if(isalpha(Grade)) cout.put(Grade);			
		}			
		Suggested header files:-			
		1. iostream.h			
		2. stdio.h 3. conio.h			
		4. ctype.h			
	(c)	Rewrite the following program after removing the syntactical errors (is any). Underline	2		
		each correction.			

```
Typdef int Num;
      Num full=100;
     Num Calc(int X)
      {
                        full=(X>2)?1:2;
                        return (full%2)
               }
      void main
      {
                        int full=1000;
                        full=Calc(::full);
                        cout<<::full<<"::">>>full>>endl;
     }
(d)
     Write the output of the following C++ program code(assume all necessary header files
                                                                                              2
     are included in program):
      void Encrypt(char *S, int key)
      {
               char *Temp=S;
               if(key%2==0)
               {
                                         }
                       key--;
               while(*Temp!='\0')
               ł
                       *Temp+=key;
                       Temp+= key;
               }
      }
      void main()
      {
               int Key_Set[]={1,2,3};
               char Pvt_Msg[]="Computer2017";
               for(int C=0;C<2;C++)</pre>
               {
               Encrypt(Pvt_Msg, Key_Set[C]);
               cout<<"New Encrypted Message after Pass "<<C+1<<" is :"<<Pvt_Msg;</pre>
               cout<<endl;
               }
      }
     Write the output of the following C++ program code(assume all necessary header files
                                                                                              3
(e)
     are included in program):
```

```
struct Ticket
            {
                     char Level;
                     int Price;
            };
            void Compute(Ticket &T)
            ł
                     if (T.Level=='A')
                     T.Price+=50;
                              else if (T.Level=='B')
                     T.Price+=30;
                              else if (T.Level=='C')
                     T.Price+=25;
                              cout<<T.Level<<"::"<<T.Price<<endl;</pre>
            }
            void main()
            {
                              Ticket Mon_Show[ ]={{'C',250},{'A',300},{'B',350}};
                              for(int count=2;count>=0; )
                              {
                                      Compute(Mon Show[count--]);
                              }
            }
           Consider the following C++ program code and choose the option(s) which are not
                                                                                                   2
      (f)
           possible as output. Also, print the minimum & maximum value of variable Pick during
           complete execution of the program.(assume all necessary header files are included in
           program):
            const int NUM=5;
            void main()
            ł
                     randomize();
                     int V1=1, V2=5, Pick;
                     while(V1<V2)
                     ł
                              Pick = random(NUM) + (V2-V1);
                              cout<<Pick<<":";</pre>
                              V1++;
                     }
            }
                  (a) 5:6:6:6:
                  (b) 4:7:5:3:
                  (c) 8:6:1:2:
                  (d) 7:5:3:1
Q2.
           What do you mean by Data Abstraction in OOPs? Explain its significance in
                                                                                                   2
      (a)
           programming with a suitable example.
           Answer the question (i) & (ii) after going through the following code. (assume all
      (b)
                                                                                                   2
           necessary header files are included in program):-
```

```
class Game
      {
               char Name[21];
               int No_of_Players;
      public:
                                                 //Function 1
               Game()
               {
                       strcpy(Name,"Cricket");
                       No of Players=11;
                       cout<<"New Game Starts\n";
               }
                                                //Function 2
               Game(char N[],int No)
                       strcpy(Name,N);
                       No_of_Players=No;
                       cout<<Name<<"comprises"<<No_of_Players<<" number of players\n";</pre>
               }
               ~Game()
                                                 //Function 3
               ł
                       cout<<"Game Ends\n";</pre>
               }
      };
         (i)
                Give the name of the feature of OOP which is implemented by Function 1 &
                2 together in the above class Game.
                Anuj made make changes to the above class Game and made Function 3
         (ii)
                private. Will he be able to execute the Line 1 successfully given below?
                Justify.
                                         void main()
                                         {
                                                 Game ABC;
                                                                      //Line 1
                                         }
(c)
      Define a class Bill in OOP with the following specification:-
                                                                                                   4
      Private members:
         1. Bill_no
                                         type long(bill number)
         2. Bill_period
                                         type integer(number of months)
                                  _
         3. No_of_calls
                                         type integer(number of mobile calls)
                                  _
         4. Payment_mode
                                         type string("online" or "offline")
                                  _
         5. Amount
                                         type float(amount of bill)
         6. Calculate_Bill() function to calculate the amount of bill given as per the
             following conditions:
                                                  Calculation Rate/call
                            No_of_calls
                                                       (in rupees)
                               <=500
                                                           1.0
                              501-1200
                                                           2.0
```

]	>1200	4.0				
	Also, the	value of Amount she	ould be reduced by 5% if Pa	yment_mode is			
	"online".						
	Public members:						
	1. A member function New_Bill() that will accept the values for Bill_no,						
	Bill_period, No_of_calls, Payment_mode from the user and invoke						
	Caluclate_Bill() to assign the value of Amount.						
	2. A member	function Print_Bill() th	nat will display all details of a Bi	11.			
(d)	Answer the question	on from (i) to (iv) base	ed on the given below code(assur	me all necessary 4			
	header files are inc	cluded in program):-					
	class	City					
	1	<pre>int City_Id;</pre>					
		char City_Name[3	30];				
	protec	int City_Populat	ion:				
	public	::	,				
		City(); void Get_Populat	cion():				
		<pre>void New_City();</pre>					
	};	<pre>void Show_City()</pre>);				
	class	State : public Cit	су				
	{	int State_Id;					
		char State_Name	[25];				
	protec	ted: int State_Popula	tion:				
	public	— •					
		<pre>State(); void New_State()</pre>					
		void Print_State()	-				
	};	Country , andusta	Ctata				
	{	Country : private	State				
	_	int Country_Id;	[05]				
	public	char Country_Nam	ne[25];				
		Country();	~				
		void New_Country void Display_Cou					
	};						
	(i) Write r	name of the class whos	e constructor is invoked first on t	the creation of a			
		ject of class Country.					
			bers which are accessible throug	gh the object of			
	<u> </u>						

		1 6	1
		class Country.	
		(iii) List name of the members which are accessible through the member function	
		"void New_Country()".	
		(iv) What will be the size(in bytes) of an object of class Country & State	
		respectively.	
Q3	(a)	Write the definition of function named Array_Swap() that will accept an integer array &	3
		its size as arguments and the function will interchange/swap elements in such a way that	
		the first element is swapped with the last element, second element is swapped with the	
		second last element and son on, only if anyone or both the elements are odd.	
		E.g. if initially array of seven elements is:	
		5, 16, 4, 7, 19, 8, 2	
		After execution of the above function, the contents of the array will be:	
		2,16, 19, 7, 4, 8, 5	
	(b)	An array A[50][30] is stored along the row in the memory with each element requiring 4	3
		bytes of storage. If the element A[10][15] is stored at 21500, then find out the base	
		address of the array and the memory address of element stored at location A[30][25]?	
	(c)	Write the definition of a member function Q_Insert() for a class Exam_Queue in C++	4
		to insert a new Application information in a dynamically allocated queue whose code is	
		already given below as a part of the program(assume all necessary header files are	
		included in program):	
		struct Application	
		{ int App_Id;	
		char App_Name[21];	
		<pre>Application *Link; };</pre>	
		class Exam_Queue	
		<pre>{ Application *Front, *Rear;</pre>	
		public:	
		Exam_Queue() //Constructor	
		Front=Rear=NULL;	
		} void Q_Insert ();	
		<pre>void Q_Delete();</pre>	
		};	
	(d)	Write the definition of a user-defined function REPEAT_ROW(int A[][3],int R, int C)	2
		in C++ that will store the elements in the following manner	
		1. All row elements except the 1 st element replaced by the 1 st element,	
		2. All row elements except the $1^{st} \& 2^{nd}$ element replaced by the 2^{nd} element,	

		3. All row elements except the 1^{st} , 2^{nd} & 3^{rd} element replaced by the 3^{rd} element and	
		so on.	
		For example: if initially the array was:-	
		5 6 10 2	
		2 6 9 12	
		18 14 5 6	
		Then, the contents of the array after execution of the above function will be:-	
		5 5 5 5	
		2 6 6 6	
		18 14 14 14	
	(e)	Evaluate the following POSTFIX expression. Show the status of Stack after execution of	2
		each operation separately:	
		TRUE, FALSE, OR, NOT, TRUE, FALSE, AND, OR	
Q4.	(a)	Answer the questions (i) & (ii) in the program segment given below for the required task.	1
		class Route	
		int Route_No; //Route Number	
		<pre>char Route_Name[21]; //Name of Route</pre>	
		int No_Kms; //Distance in kms on Route public:	
		void New_Route(); //Accepts details of new Route	
		void Show_Route(); //Display details of a Route	
		<pre>int Get_RouteNo() //Return the Route Number { return Route_No; }</pre>	
		void Update Kms(int K)	
		{ No_Kms=K; }	
		<pre>}; void Update_Route(int No, int New_Kms) //Update No_Kms of a Route</pre>	
		{	
		Route R; fstream File("ROUTE.DAT",ios::in ios::out ios::binary);	
		while(!File.eof())	
		{	
		<pre>File.read((char*)&R, sizeof(R)); if((R.Get_RouteNo()==No))</pre>	
		<pre>{ R.Update_Kms(New_Kms);</pre>	
		//Statement 1	
		}	
		} 5:1	
		<pre>File.close(); }</pre>	
		(i) Write Statement 1 to position the file pointer to the appropriate place so that	
		the data updation is done for the correct Route.	
		Page No. 7	

		(ii) Write Statement 2 to perform the write operation so that the updation is done	
		in the binary file "ROUTE.DAT".	
	(b)	Write a user-defined function named Count () that will read the contents of text file	2
	(0)	named "Report.txt" and count the number of lines which starts with either 'I' or 'M'.	-
		E.g. In the following paragraph, there are 2 lines starting with 'I' or 'M':	
		"India is the fastest growing economy.	
		India is looking for more investments around the globe.	
		The whole world is looking at India as a great market.	
		Moreover, China is lying behind India."	
	(c)	Consider the following class Item:-	3
		class ltem	
		int ItemId;	
		int Quantity;	
		float Price; public:	
		void NewItem()	
		<pre>{ cin>>ItemId>>Quantity>>Price;</pre>	
		}	
		<pre>void ShowItem()</pre>	
		<pre>{ cout<<itemid<<":"<<quantity<<":"<<price<<endl;< pre=""></itemid<<":"<<quantity<<":"<<price<<endl;<></pre>	
		}	
		<pre>void Set_Price(float P)</pre>	
		<pre>{ Price=P; } int Ret_Id()</pre>	
		{ return ItemId; }	
		};	
		Write a function named Change_Item(int Id, float Pr) to modify the price of the item	
		whose ItemId & new price are passed as an argument.	
		SECTION – B (Python)	
Q1	(a)	Differentiate between break and continue statement with the help of an example.	
			2
	(b)	Identify and write the name of the module to which the following functions belong: i. ceil() ii. findall()	1
	(c)	Observe the following Python code very carefully and rewrite it after removing all syntactical errors with each correction underlined.	2
		DEF execmain():	
		<pre>x = input("Enter a number:")</pre>	
		<pre>if (abs(x) = x): print"You entered a positive number"</pre>	
		else:	
		x=*-1 print" Number made positive:"x	
		execmain()	

	(d)	Write the output of the following Python code:	2
		i=5 j=7 x=0	
		x-0 i=i+(j-i)	
		x=j+i	
		<pre>print x,":",i j=j**2</pre>	
		x=j+i	
		i=i+1	
		print i,":",j	
	(e)	Write the output of the following Python program code:	3
		Data =['D','o',' ','I','t',' ','@',' ','1','2','3',' ','!']	
		<pre>for i in range(len(Data)-1):</pre>	
		<pre>if (Data[i].isupper()): Data[i]=Data[i]_lower()</pre>	
		Data[i]=Data[i].lower() elif (Data[i].isspace()):	
		Data[i]=Data[i+1]	
		print Data	
	(f)	Study the following program and select the possible output(s) from the options (i) to (iv) following it. Also, write the maximum and the minimum values that can be assigned to the variable Y.	2
		<pre>import random X= random.random()</pre>	
		Y = random.randint(0,4)	
		<pre>print int(X),":",Y+int(X)</pre>	
		i) 0 : 0	
		ii) 1 : 0	
		iii) 2 : 4	
		iv) 0 : 3	
Q2	(a)	Explain operator overloading with the help of an example.	2
	(b)	Observe the following Python code and answer the questions (i) and (ii): class BOOK :	
		count=0	
		<pre>definit(self): # Function 1 self.Author="Not assigned"</pre>	
		self.Publisher = "Not assigned"	
		<pre>self.ISBN = "Not assigned"</pre>	
		<pre>def display(self): print self.Author,self.Publisher,self.ISBN</pre>	
		Østaticmethod	
		<pre>def bookcount(): # Function 2 BOOK.count=BOOK.count+1</pre>	
		return BOOK.count	
	(i)	How is data member 'count' different from data member 'Author'?	1
	(ii)	Fill in the blanks:	1
		B= BOOK ()	

		#Write statement to #Write statement to		
(c)	SetCourse() to assign	sign REGNO as 0, Scor gn Course and Fees on th		4 s
	per the following c	CNAME	Food	
	Score >=9.0 -<=10.0		Fees

(d)	<pre>Answer the questions (i) and (ii) ba class Vehicle(object): definit(self,l=0,w=0): self.length=1 self.width=w def define(self): print "Vehicle with ler class Car(Vehicle): definit(self,clr,seats Vehicleinit(self,l self.colour=clr self.seatingCapacity=se def changeGears(self,gr): print "changed to gear" def turn(self,direction): print "turned to",direct class RacingCar(Car): definit(self,clr,seats Carinit(self,clr,seats Carinit(self,clr,seats Carinit(self,clr,seats Self.turnRadius=tr self.speed=spd def start(self): self.changeGears(2) print"Racing car starts</pre>	ngth", self.length,"in s,l,w): L,w) # eats ',gr ction,"direction" s,l,w,tr,spd): # seats,l,w) #		
(i)	Explain the relationship between L	ine 1, Line 2 and Line 3		
(ii)	Predict the output that will be prod rcar=RacingCar('Blue',2,206, rcar.start() rcar.turn("left")	uced on the execution of		

Q3	(a)	Write the definition of a function Reverse(X) in Python, to display the elements in reverse order such that each displayed element is the twice of the original element (element * 2) of the List X in the following manner: Example: If List X contains 7 integers is as follows:			
		X[0] X[1] X[2] X[3] X[4] X[5] X[6]			
		4 8 7 5 6 2 10			
		After executing the function, the array content should be displayed as follows:			
		<u>20 4 12 10 14 16 8</u>			
	(b)	Consider the following unsorted list : [22, 54, 12, 90, 55, 78] Write the passes of selection sort for sorting the list in ascending order till the 3 rd iteration.	3		
	(c)	Consider the following class Order and do as directed: class ORDER: L=[] definit(self): self.OID = 0 def insertorder(self): self.OID = input("Enter Order Id") def delorder(self):	4		
		 i. Fill in the blank 1 with a statement to insert OID in the Queue maintained using List L. ii. Complete the definition of delorder() to delete OID from the Queue maintained using List L, the function should return the OID being deleted or -1 in case the Queue is empty. 			
	d)	Write a generator function to generate odd numbers between a and b(including b).Note: a and b are received as an argument by the function.	3		
	(e)	Evaluate the following postfix expression using a stack. Show the contents of stack after execution of each operation: 10,40,25,-,*,15,4,*,+	2		
Q4.	(a)	Nancy intends to position the file pointer to the beginning of a text file. Write Python statement for the same assuming F is the File object.	1		
	(b)	 Write a function countmy() in Python to read the text file "DATA.TXT" and count the number of times "my" occurs in the file. For example if the file "DATA.TXT" contains: "This is my website. I have displayed my preferences in the CHOICE section." The countmy() function should display the output as: "my occurs 2 times". 	2		
	(c)	Write a function in python to search and display details of all those students, whose stream is "HUMANITIES" from pickled file "Student.dat". Assuming the pickled file is containing the objects of the following class:	3		

		cla	<pre>class STUDENT: definit(self): self.RNO = 0 self.NAME = " " self.STREAM = " " self.PERCENT = 0.0 def ACCEPT(self): self.RNO = input("Enter Roll no") self.RNME = raw_input("Enter Name") self.STREAM = raw_input("Enter Stream") self.STREAM = raw_input("Enter percentage") def DISPLAY(self): print self.RNO,self.NAME,self.STREAM,self.PERCENT def RET_STREAM(self): return(self.STREAM)</pre>
